Key Findings

- Beginning in the 2022-23 school year, the use of the Community Eligibility Provision (CEP) district wide removed the need for families to fill out an application to receive breakfast and lunch at no cost.
- The new Educational Benefits Form (EBF) collects household financial information and allows eligible families to access benefits in our schools and community while providing a socioeconomic indicator for students and schools.
- In 2024-25, 37,591 (71.5%) early childhood through grade 12 students are eligible for educational benefits.
- The district educational benefit eligibility rate of 71.5% is 1.2% lower than the 72.7% educational benefit eligibility rate counted in the 2023-24 school year.
- The eligibility rates included in this report for 2024-25 are likely to be artificially low because the EBF is not required of families.
- More than 34,000 (65.4%) students have EBF data on record for this school year while about 18,000 (34.6%) students did not have EBF information at the time this report was created.
- In the third year of collecting the EBF, rates appear roughly comparable to prepandemic free and reduced-price lunch rates suggesting that this new metric is a viable alternative to measure district and school level socioeconomics.
- Student and family socioeconomic status has been shown to be a significant predictor of academic performance at the district and school levels (e.g., Abbott et al., 2002; Sirin, 2005); thus, students' scores on summative, national and state assessments could be affected.
- This report uses the EBF data as of 10/15/2024 for students enrolled on 10/1/2024.

Background

Since 1994, the Nebraska Department of Education (NDE) has required all Nebraska school districts to report the number of students in each school approved for free or reduced-price lunch as of October 1 each school year. Previously, families of students submitted applications indicating financial need for participation in the National School Lunch Program or they were directly certified by Nutrition Services through state databases. While not required, application for the federal meal program was strongly encouraged by schools. Nationally, participation in this program, although not the best indicator, is typically the only indicator of socioeconomics available to school districts.

Beginning in the 2022-23 school year, all students receive breakfast and lunch at no cost through the Community Eligibility Provision (CEP) and the United States Department of Agriculture (USDA). The Community Eligibility Provision removes the need for families to fill out an application to receive breakfast and lunch at no cost. District eligibility for the CEP is based on the percentage of students in the district that are directly certified by Nutrition Services through state databases and has been approved through the 2024-25 school year for Omaha Public Schools.

The Educational Benefits Form (EBF) is used to collect financial information that allows eligible families to access benefits in our schools and community. These benefits include discounts on home internet service, discounted or waived fees for academic testing, access to college and postsecondary resources and school and community enrichment opportunities. In addition to access to these benefits, student eligibility for educational benefits is used as the new school socioeconomic indicator beginning in the 2022-23 school year replacing free or reduced lunch eligibility.

Disparities in student experience, access to resources, and community support structures mean that students from low-income households consistently perform at lower levels than their more affluent peers, highlighting the importance of socioeconomic data to inform resource allocation and support strategies (Owens, 2018; Miller et al., 2019). This reporting provides a district, school and student group level socioeconomic indicator to help direct resources and interventions to schools and students that would most benefit.

History

Over the past 20 years, free and reduced lunch eligibility rates have ranged from a low of 53.2% in 2005-06 to a high of 77.4% in 2020-21. The eligibility rate in 2020-21 was higher than most years because students who had not returned a lunch application were not removed after the 30 days of school mark because of the impact of COVID-19, per the Nebraska Department of Education. The district eligibility rate of 69.5% in 2021-22 is likely artificially low because of the USDA waiver allowing school district to serve all students school meals free of cost in 2021-22. This practice lowered the number of meal applications received from families who were not directly certified.

Over the last three years, the use of CEP and collection of the EBF has also lowered eligibility rates because students are not required to return a form to receive breakfast and lunch at no cost. While metrics have changed between free and reduced lunch and educational benefits, these rates are generally comparable and suggest that more than 70% of the students in the Omaha Public Schools reside in households that are within at least 185% of the federal poverty level in the measured year. The Department of Health and Human Services establishes the federal poverty guidelines each year. Using this poverty guideline, the United States Department of Agriculture sets the guidelines for free and reduced meal eligibility by multiplying the income poverty guidelines by 1.30 and 1.85, respectively. In 2024, a household of four people making less than \$58,000 would be eligible for reduced price meals while a household making less than \$41,000 would be eligible for free meals.

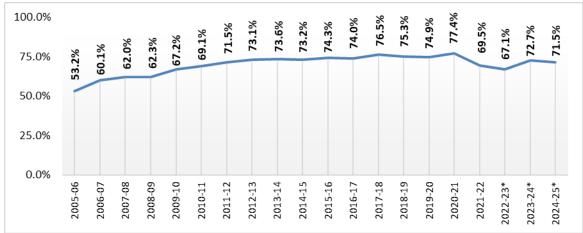

Figure 1. Free and Reduced/Educational benefit Eligibility Rates: 2005-06 to 2024-25

* Depicts educational benefits eligibility while all previous years are free or reduced lunch eligibility.

Additionally, in analyzing historical trends in SES data, the Council of Great City Schools (2024) suggests that such indicators continue to provide critical insights into academic performance disparities, necessitating targeted interventions to address inequities (CGCS, 2024).

School and Community

The Omaha Public School district is very socioeconomically diverse and reflects the community in which it resides. The proportion of students eligible for educational benefits at a school level ranges from below 25% to over 90% at the district's elementary schools. This distribution is depicted below in Figure 2 and suggests a concentration of eligibility in the eastern half of Omaha. The proportion of students eligible for educational benefits at secondary school's ranges from just over 46% to almost 88%. Elementary schools are smaller and tend to reflect differences between the neighborhoods in which they reside while middle schools and high schools are larger and tend to pull students from a larger area. Rates of eligibility for educational benefits

are also likely lower at the secondary level because of a lower return rate of the EBF. About 64% of secondary students have a completed form compared to 70% of elementary students. From a larger community perspective, the concentration of free and reduced lunch and educational benefit eligibility is in the urban core of the Omaha metropolitan area while more suburban school districts generally have a lower rate of eligibility. Figure 3 below depicts the 2024-25 EBF rates for OPS elementary schools and the free and reduced lunch rate for elementary schools in the surrounding school districts compiled from NDE reporting.

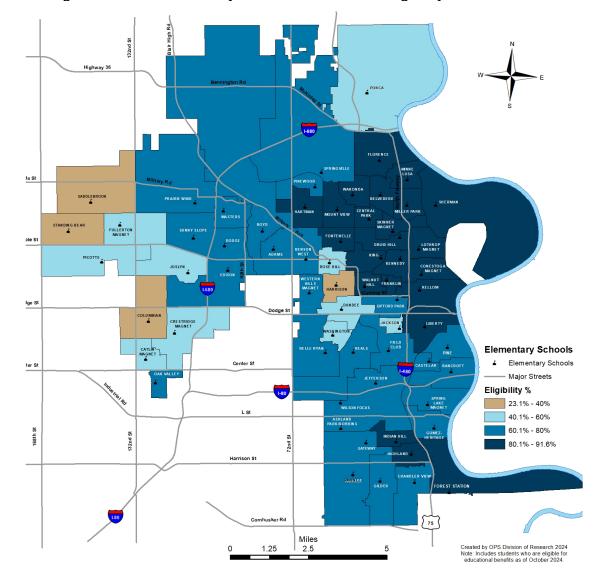

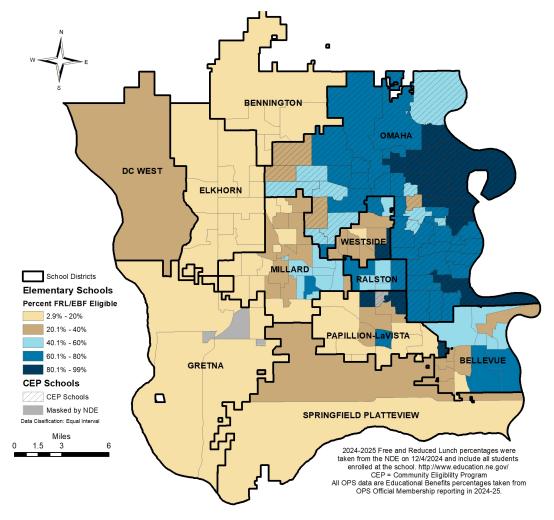

Figure 2. OPS Elementary Educational Benefit Eligibility Rates: 2024-25

Note: For CEP schools outside of OPS, NDE calculates the FRL rate by multiplying the directly certified students by 1.6. As a result, these rates are likely higher than what would be reported if the school were not using CEP.

Student Groups

Eligibility for educational benefit gaps continue to exist for some student groups. Asian, American Indian or Alaska Native, and Black or African American students have the highest eligibility rates while White students have the lowest rates of eligibility (Figure 4). Students who have exited the English Learner (EL) program have the highest eligibility rates followed by student in the EL program and students who are not ELs (Figure 5). Prior to the collection of the EBF, EL and Exited EL students had similar levels of eligibility. This recent difference could be a result of a changing population or an effect of the collection of the EBF. Students with an Individual Education Program (IEP) are somewhat more likely to be eligible compared to students who do not have an IEP (Figure 6).

Figure 4. Educational Benefit Eligibility Rates by Race and Ethnicity: 2024-25

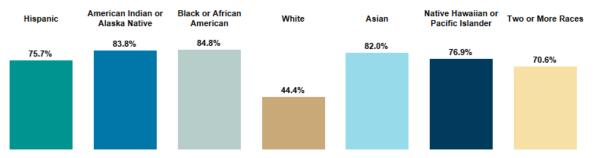

Figure 5. Educational Benefit Eligibility Rates by EL Status: 2024-25

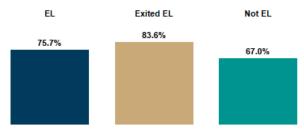

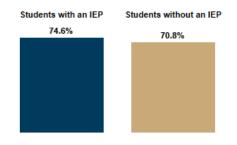

Figure 6. Educational Benefit Eligibility Rates by IEP Status: 2024-25

Not EL includes students who waived services and students who were excited to the special education program.

Conclusion

Educational Benefits Eligibility continues to be a relatively reliable indicator of school and student socioeconomic status. The current rate of 71.5% of students eligible for educational benefits is comparable to previous years. Likewise, rates for the 2024-25 school year are similar across student groups and schools as compared to prior years. Socioeconomic indicators like household income are valuable measures that can be used to better understand the community in which schools reside and how school and student needs differ. While socioeconomic status is not directly impacted by schools, given its impact on student outcomes, it should be monitored to direct resources and interventions to schools and students that would most benefit.

*New race/ethnicity collection guidelines begin

**Depicts educational benefits eligibility while all previous years are free or reduced lunch eligibility.

Beginning in the 2022-23 school year, all students will receive breakfast and lunch at no cost through the Community Eligibility Provision (CEP) and the United States Department of Agriculture (USDA). The Community Eligibility Provision removes the need for families to fill out an application to receive breakfast and lunch at no cost. A new Educational Benefits Form (EBF) is available beginning in the 2022-23 school year that allows eligible families to access additional benefits in our schools and community. Eligibility for educational benefits is the replacement metric for Free or Reduced Lunch eligibility beginning in the 2022-23 school year. The free or reduced lunch eligibility in this report for 2021-22 are also likely artificially low because of the USDA waiver allowing school district to serve all students school meals free of cost in 2021-22

* Title 1 # Parent pay pre-kindergarten not included

Beginning in the 2022-23 school year, all students will receive breakfast and lunch at no cost through the Community Eligibility Provision (CEP) and the United States Department of Agriculture (USDA). The Community Eligibility Provision removes the need for families to fill out an application to receive breakfast and lunch at no cost. A new Educational Benefits Form (EBF) is available beginning in the 2022-23 school year that allows eligible families to access additional benefits in our schools and community. Eligibility for educational benefits is the replacement metric for Free or Reduced Lunch eligibility beginning in the 2022-23 school year.
